

{ They said they didn't
get the email -
did they? }

{ Who opened and
changed that
confidential database? }

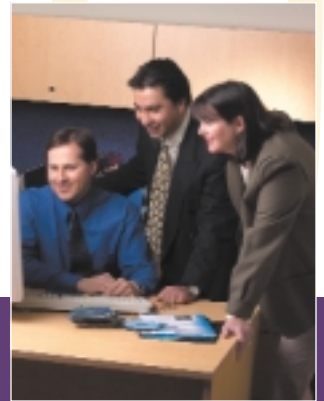

{ Why were the Domino
security settings
changed - who, when? }

SecurTrac™ can relieve your administration headaches...

SecurTrac™, an award-winning system, is the **ONLY** complete audit trail system that tracks the life cycle of all objects in the **Domino environment**, as well as tracking all operational activities with configurable, real-time alert notification. **SecurTrac™** simplifies administration by providing a logical starting point to find and address changes caused by intentional and unintentional events.

KEY FEATURES

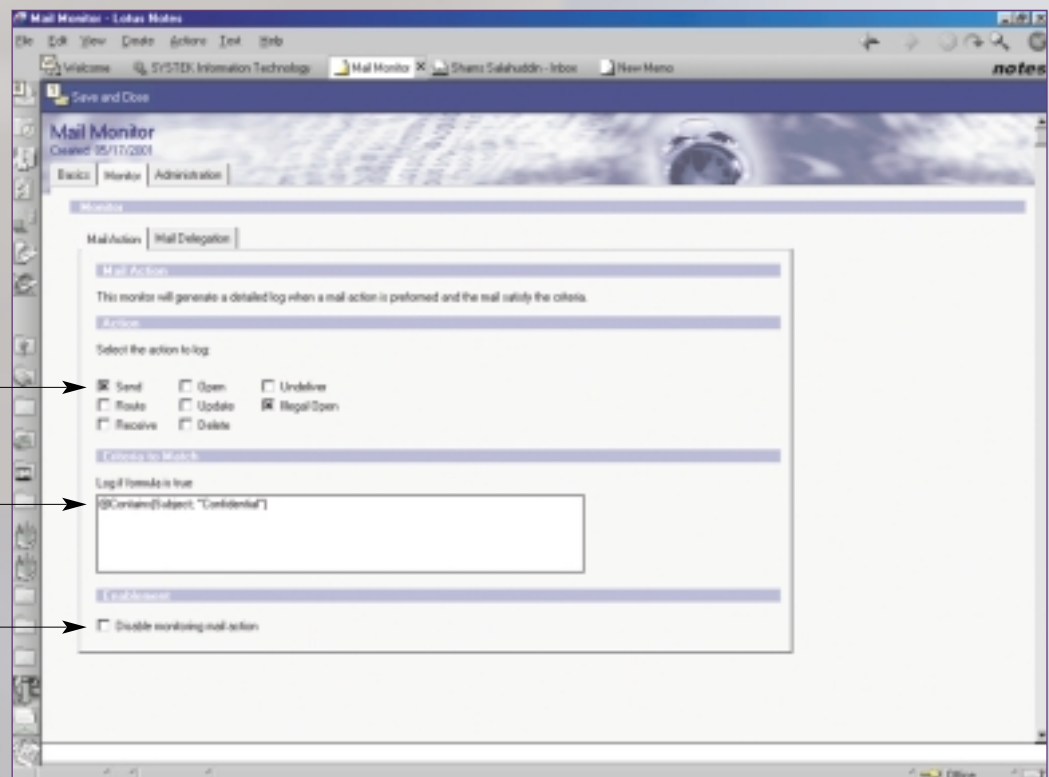

Tracking

Hunts

Audit Trails

Alerts

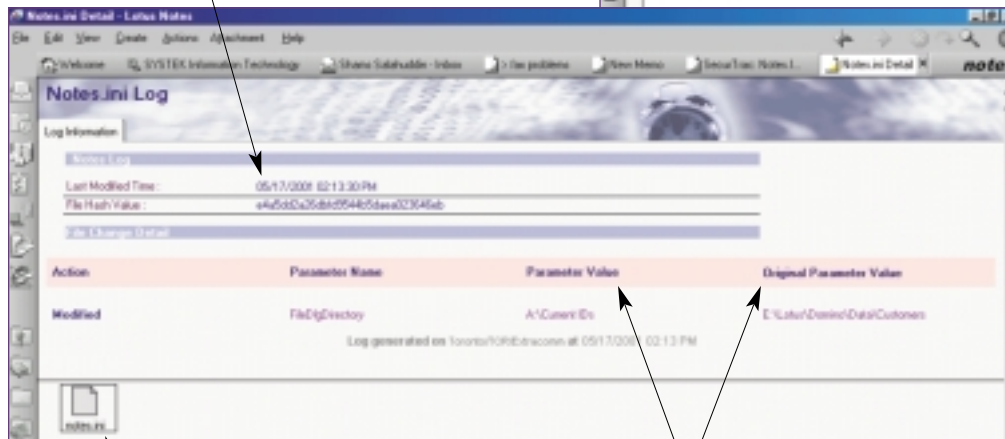

Track and monitor email!

Receive alerts when changes to key files or databases are made!

Specify who should be notified when changes are recorded.

Every incremental change and data/time will be recorded.

View new parameter value as well as original.

View changed values by clicking on item.

Track information and set up monitors fast

Eliminate "It wasn't me" type answers through monitoring and detection. Events and activities relating to any and all Domino objects can be tracked and validated. Every incremental change is recorded, even for a single parameter value. Shorten the hunt cycle of user errors by quickly setting up monitors for:

- Domino databases
- Domino settings (notes.ini)
- Domino Directory (names.nsf)
- Email

Perform auditing regularly and be proactive

An audit trail of all activities in corporate databases and email is critical to corporate security management. SecurTrac monitors the entire life cycle of Notes documents and email messages. Quickly identify when and which database or email is opened, changed and by whom.

Real-time monitoring and alerts

Notes assets can be stolen in seconds. Detecting any irregularities early is very important. Once SecurTrac Monitor is enabled, all alerts are readily reported through email, SMS, or pager services. Operating in real time, SecurTrac demonstrates its powerful administrative functions in an enterprise-level environment. Security officers or administrators can monitor all Domino servers, search and filter specific information, as well as generate reports.

Lower costs and save time

Separate Notes auditing development for each Domino application is no longer necessary. SecurTrac provides the central logging services. These logging services allow companies to save development time on monitoring and logging work. This development time saving allows for more concentration on the application's functionalities.

"Anyone with auditing requirements in their applications or with interest in securing the flow of information due to regulatory requirements would be well served to evaluate and deploy SecurTrac."

*Lotus Advisor Magazine,
Editor's Choice Awards 2001,
April 2001 issue.*

FEATURES AND FUNCTIONS

SecurTrac is comprised of five key components with specific functionalities :

Featured Component	Functions
Mail Monitoring	<ul style="list-style-type: none">• Tracks and monitors mail messages and all associated events including - send/receive/open/update/delete/route/undeliver/illegal open• Specify whose email and which events are to be monitored, as well as who will have access to the log or receive notification• Logs email delegation activities
Database Monitoring	<ul style="list-style-type: none">• Logs document changes - open/update/addition/deletion• Logs design element changes - forms and field changes• Logs Access Control List (ACL) changes - who, when, what• User definable document selection criteria
Domino Directory Monitoring	<ul style="list-style-type: none">• Logs Domino Directory changes - open/update/addition/deletion• Logs design element changes - forms and field changes• Logs Access Control List (ACL) changes - who, when, what
Notes.INI File Monitoring	<ul style="list-style-type: none">• Logs content and/or last modified time changes of the Notes.ini file• Records all changes even if file is edited with an external editing tool• Changed parameter values are displayed as well as previous parameter values
Intrusion Detection	<ul style="list-style-type: none">• Logs and monitors occurrences of malicious events including illegal access to databases, illegal database creation, illegal server access, or access without authorized public key• Can be configured for user-defined events or pre-defined events
Features of Real-Time Monitoring	<ul style="list-style-type: none">• Allows system administrator to readily administer and monitor all Domino servers or selected servers from any location• Once created, a monitor is saved and it can be enabled or disabled at anytime - no need to recreate or rescript• Lotus formulas may be used to add extra flexibility for selection criteria• Alert email notification to administrator and/or other specified users• All monitored events are presented by date, time and with associated values
