

**Print  
the way  
YOU want**

# NotesToPaper®

## The SoftVision developer products

"To simplify and to enhance" is the simple philosophy of our products. Simplify the task the end-users face. Enhance the functionality of the Lotus Notes based applications.

## Why NotesToPaper?

Even today, in the electronic day and age, paper is still one of the most important media. The majority of business communication, be it internal or toward customers, is paper-based. Either determined by legal prerequisites or by corporate identity needs, correspondence, invoices and forms have to meet high quality standards nowadays. Layout and legibility transport an image of the corporation. In order to extend the Lotus Notes print capabilities the user had to utilize external tools. Seen through the eyes of the end-user, this meant leaving the Notes application, thus disrupting the normal work-flow. This creates room for error and usually necessitates additional training- and administration, thus increases costs. The definition of the most diverse layout-requirements aside, many users ask for working print previews in addition to query-, sort- and calculatory-functions to reduce the workload. But reports do not only have to be printed, but also have to be returned to Notes, sent via Notes-Mail or viewed via the Web. NotesToPaper offers all that and more.

## What is NotesToPaper?

NotesToPaper is a very powerful report generator for database independent reporting to be integrated into any Lotus Notes application. NotesToPaper consists of two components, both of which are multilingual (English/German by default). NotesToPaper-Setup is the MS-Windows based report designer, NotesToPaper-Print is the "print-engine". The integration of NotesToPaper into any Lotus Notes application is based on Lotus Script. Script is used to select the data and to start the print job.

The print options are equal to those, that have become "Windows-Standard". Before a document is sent to the printer, the users can set preferences like number of copies, starting position for labels, etc. What follows is a true "What You See Is What You Get-Preview" that shows all the pages of the printout, allows viewing at different zoom levels and offers an option to send reports to other users via Lotus Notes Mail.

## What can NotesToPaper do for you?

NotesToPaper can be used for a multitude of purposes. Complex forms such as e.g.: customized calendars, lists of all sorts, labels, letters, serial letters, envelopes, containing things like bar-codes, graphics, plain and preformatted text, and many more, no longer present a problem. Need to be able to print to existing pre-printed forms? No problem. While designing the report, simply scan your existing form, place it in the background of the report you are creating, place and position your fields in the drag and drop WYSIWYG report designer. Done. Work with multiple layers, each with an own layout, show layers or hide layers depending on conditions set in NotesToPapers own macro language. Set default printers for each report or send first and following pages to different printers or paper trays. Once reports have been created, use NotesToPaper-Setup to comfortably manage the reports within Lotus Notes. Create a central report repository or make the reports part of your Lotus Notes applications. Use replication to roll out additional reports or enhanced functionality. Print the way you want, work the way you want.

## Technical Data

Available platforms:

### NotesToPaper-Print

For the Lotus Notes Client (starting Version 4.1)  
MS Windows '9x, MS Windows NT (3.51, 4.0)  
MS Windows 2000

### NotesToPaper-Setup

MS Windows '9x, MS Windows NT (3.51, 4.0)  
MS Windows 2000

### Workstation based software

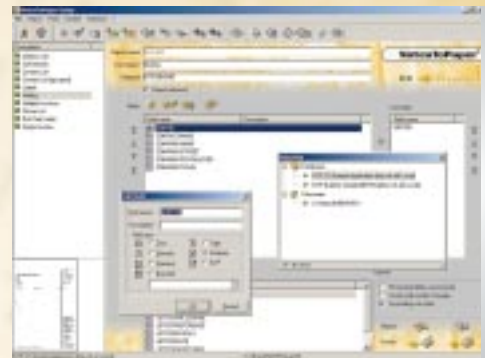

The basis of NotesToPaper are DLL's on the Notes workstation. No additional components are necessary for the Notes Server/Domino Server.

# NotesToPaper®

- Create reports to meet your demands
- Layout-editor for visual report design, use different types of objects such as e.g.: lists, labels, barcodes, graphics, text, rich text
- Real time preview during report layout
- Print reports with a true WYSIWYG preview
- User defined "zoom in" and "zoom out" of reports
- "Flip through" all pages of a report
- Define "first" and "follow-up" pages
- Design reports with different page layouts on each and every page
- Work with objects, layers and conditions
- Use totals, sub-totals, grouping, headers, footers, group-headers and footers
- Use the integrated Macro programming language
- Set predefined printers
- Set predefined printer orientation (portrait/landscape)
- Save layouts in Notes databases or on the file system
- Save reports in Lotus Notes once created
- Send reports via Notes-mail
- Complete integration in Notes application via Lotus script
- Freeware report-viewer to view, save and print reports
- Use the report-viewer to view reports via the Web
- Multilingual on the fly

Create report layouts as templates to be called from Lotus Notes with NotesToPaper-Setup.

Use the integrated designer to set all report parameters for the end-user.
